Category Name Data Server (DSS) Design

Actionee ECS

Sub Category

Subject Absence of User's Guides for Data from Document Types

## Description of Problem or Suggestion:

Data Set User's Guides are essential in helping the user to use the data. It is distinct from the Guide, which is an aid to ordering documents. (An example of a Data Set User's Guide is the GDAAC's PAL User's Guide) This is not included in the list of document types for which metadata services are provided in the ESDT CSC.

## Originator's Recommendation

Add data set user's guide as a document type.

Concur that the Guide documents as they are currently modeled in DID 311, and the Guide ESDTs as they are designed in the DDSRV are based primarily on the Guide subsystem documents in the current V0 system. Concur that the ECS team should investigate whether any documents in the current model fulfill the requirements in the RID.

The modeling of the Users Guides will be investigated as part of the DID 311 recovery plan. As part of this plan, the "archive specifications" of the documents will be produced for the document types currently contained in the model. During this time, Data Engineering will verify whether the User Guide is covered by an existing document type (i.e., Reference Paper or Delivered Algorithm Package), or whether a new document type will need to be added. These archive specifications are expected to be completed on Nov 17.

In addition, the DDSRV Design will be reviewed to make sure that that an appropriate document data type is included to handle Data Set User's Guide type documents.
